

5 Ways to Accelerate Learning with Video

Looking for ways to mitigate learning loss and instructional interruptions? Look no further than video. It's not only a medium that students already love (see: easy win), but also an engaging and multifaceted tool for championing learning. Here are 5 quick ways to do so.

1. Make it interactive

Interactive video is considered **3x more effective** than standard – bolster lessons with interactive assessment questions, real-time polls and surveys, discussion forums, and more.

2. Collaborate with others

Create **evergreen instructional videos** that can be used again and again, plus share with other instructors and schools. The beauty of video? It's easily scalable.

3. Turn learners into instructors

Put a twist on think-pair-shares with **student-driven video presentations**. Learners become instructors, instructors become observers, and everyone becomes an invested participant.

4. Flip the classroom

A flipped classroom is perfect for **interactive instructional videos**. Then, reserve in-person (or remote) class time for those wondrous higher-order thinking skills.

5. Build SEL skills

Video creation is an A+ tool for building social and emotional learning skills. Empower students to **take agency in their studies** and express their learnings in unique ways.
